Sustainable actions underway to help reduce our:

ENERGY

- We use more efficient engines with low emissions to reduce fuel demand and save energy usage.
- Aim to achieve higher occupancy for each boat before departure to save fuel.
- Booking office & café is designed for minimal heating and cooling demands and low energy lighting to reduce energy usage

WATER

- Rainwater is collected into tanks to service the booking office and café.
- Waterless urinals and low flow toilets save water, and our special dishwasher uses just 4 litres, recycled through a filter allowing multiple use of this water.
- Our low maintenance garden is largely watered from our septic treatment system, and has low water demands.

WASTE

- All waste water is collected and processed through our septic system to avoid any water pollution.
- Low waste is achieved by recycling, re-using and composting.
- Food scraps are fed to local chickens or composted.
